## Technical Bulletin #2023-M-02

To: All POLYGLASS Users

CC: POLYGLASS Sales & Technical Services Personnel

Date: April 11, 2023

From: James E. Akins, National Technical Services Manager

Re: Polyglass Polybase V Applications

This Technical Bulletin is to serve as an addendum to the product data sheet (PDS) for the Polyglass Polybase V, APP base sheet, with regards to applications.

The Polybase is designed for use as a base ply or interply layer in multi-layer low-slope assemblies. The top and bottom surfaces of Polybase V are finished with polyolefin film.

Application methods include mechanically attached or heat-welded (torched). Successive system layers can be heat-welded with a ply of Polyglass APP interply or cap sheet membranes. It is <u>not</u> intended for or approved for use as an underlayment with direct application of a self-adhered membrane.

In the event of more detail application and warranty questions, please contact the POLYGLASS Technical Services Department at 866-794-9659.
